1. Description

MPI-815H is a 150W ATX power supply with active PFC for industrial and embedded system application. The device utilizes a thermally efficient U channel chassis design. Design to be convection cooled.

+5Vsb	0A	0.75A	1.5A	±1%	±4%	100mV	4.80V to 5.20V

Total Output Power: 150W at 50°C environment temperature.

Note: 1) The maximum total combined output power on the +3.3V and +5V rails is 90W.

2) Measured by a 20MHz bandwidth limited oscilloscope and the each output is connected with a 10µF Electrolytic Capacitor and a 0.1µF Ceramic Capacitor.

3) Initial Setting Accuracy is at Input 110VAC and all output at 60% rated load.

4. Interface Signals and Internal Protection

Parameter	Conditions/Description
Power On/Off	The power supply will be turned on when the power On/Off pin is connected to secondary GND.
Power Good Signal	When power is turned on, the power good signal will go high 100ms to 500ms after all output DC voltages are within regulation limits.
Power Fail Signal	The power fail signal will go low at least 1 mS before any of the output voltages fall below the regulation limits.
Short Circuit Protection	Fully protected against short circuit. Latch off mode upon of short circuit condition.
Over Voltage Protection	For some reason the power supply fails to control itself, the build-in over voltage protection circuit will shut down the outputs to prevent damaging external circuits. The trigger point is 7V max. at +5V. If the OVP occur, PSU cannot be recovered.
Over Temperature Protection	When the power supply operating over the temperature or over load limit, the power supply will be shut down automatically to protect itself. The protection point is at the temperature of the HS1 over 110°C. After the temperature of HS1 going down, the power supply will restart automatically.
